SUBJECT INDEX

to Volume 107, May–August, 1984

Ah locus, inbred mouse, 447
Allele
  allozyme low and null activity, *Drosophila melanogaster*, 295
  conditional, *uvsX* and *uvsY*, bacteriophage T4, 505
  multiple, inbreeding, 703
Allozyme, null and low activity alleles, *Drosophila melanogaster*, 295
Aneuploidy, non-Mendelian marker transmission, *Chlamydomonas reinhardtii*, 563
Apolipoprotein A-1, mouse, 463
Aryl hydrocarbon (benzo[a]pyrene) hydroxylase, inbred mouse, 447

Bacillus subtilis, 551
Background, genetic, mutation effect, bacteriophage T2, *Escherichia coli*, 1
Bacteriophage
  T2, 1
  T4, 343, 505, 525, 537
Barrier, cross, maize, 103

Carbon, catabolite repression, *Saccharomyces cerevisiae*, 19
Centrarchid, 435
Character, quantitative, genetic variation, 321
Chlamydomonas reinhardtii, 563
Chromosome
  17, inbred mouse, 447
  9, mouse, 463
  extra, transmission, rice, 141
  pachytene, rice, 141
  rearrangements, *P* factors, *Drosophila melanogaster*, 657
  sex, *Drosophila melanogaster*, 591, 611
  specific meiotic mutant, *Drosophila melanogaster*, 65
Cistron, ribosomal, *Drosophila melanogaster*, 395, 405
Clarkia, 131
Complex, multigene, bacteriophage T4, 343
Conversion, mitotic gene, *Saccharomyces cerevisiae*, 355
Crossing over, A-B hypoploids, male *vs.* female, maize, 117
Cytochrome, P_1-450, inbred mouse, 447
Cytoplasm
  gene interaction, 166
  transfer, *Paramecium tetraurelia*, 367
  transmission theory, 679

Dihydrofolate reductase, bacteriophage T4, 343
Diploidy, non-Mendelian marker transmission, *Chlamydomonas reinhardtii*, 563
DNA
  mitochondrial, evolution, 679
  replication, bacteriophage T4, 343
  replication gene cluster, bacteriophage T4, 537
Dosage
  compensation
    Clarkia, 131
    Drosophila melanogaster, 231
Drosophila
  C virus, *Drosophila melanogaster*, 635
  melanogaster, 49, 65, 231, 279, 295, 331, 375, 395, 405, 423, 591, 611, 635, 645, 657
  pseudoobscura, 577
Drug, metabolism, inbred mouse, 447
Dysgenesis, hybrid, *Drosophila melanogaster*, 49, 331

Endosperm, development, maize, 103
Enhancer of SD, *Drosophila melanogaster*, 423
Enzyme, loci, linkage, sunfish, 435
Escherichia coli, 1, 9
Esterase 17, mouse, 463
Evolution
  mtDNA, 679
  repeated gene, *Drosophila melanogaster*, 611

fib, macrofiber A and B, *Bacillus subtilis*, 551
Finite island model, 501
Folate, analog resistance, bacteriophage T4, 343
Formica, 307

Gene
  -cytoplasm interaction, 166
  duplication, Clarkia, 131
  mitotic, conversion, *Saccharomyces cerevisiae*, 355
  regulation, positive feedback, *Drosophila melanogaster*, 231

repair, *Saccharomyces cerevisiae*, 33
symbolization, rice, 141
tandemly repeated, *Drosophila melanogaster*, 611
uvsX and *uvsY*, conditional alleles, bacteriophage T4, 505
Genetic correlation, Formica, 307
Glucose, invertase regulation, *Saccharomyces cerevisiae*, 19
Glued, *Drosophila melanogaster*, 645
Growth, targeted, mouse, 79

Hardy-Weinberg, proportion, 703
HIS4, gene, *Saccharomyces cerevisiae*, 179
Hybrid
dysgenesis, *Drosophila melanogaster*, 49, 331
interspecific, sunfish, 435
mouse-hamster somatic cell, 447
Hyper-rec, mutation, *Saccharomyces cerevisiae*, 33

Imprinting, maize, 103
Inbreeding, coefficient, estimation, 703
Instability, kernel spotting, maize, 477
Invertase, constitutive mutants, *Saccharomyces cerevisiae*, 19
Isolation, reproductive, *Drosophila melanogaster*, 331
Isozyme
loci, independent assortment, sunfish, 435
plant, Clarkia, 131

Karyoplasm, transfer, *Paramecium tetraurelia*, 367
Karyotype
rare male mating advantage, *Drosophila melanogaster*, 577
rice, 141
Killer, double-stranded RNA, *Saccharomyces cerevisiae*, 199

Lepomis, 435
Linkage
chromosome *9*, mouse, 463
conserved, human/mouse, 463
enzyme loci, sunfish, 435
Linkage group, chromosome and, associations, rice, 141

Macrofiber, helical, loci governing, *Bacillus subtilis*, 551
Maize, 103, 117, 477, 489
Map, linkage, rice, 141
Mating
nonrandom, 703
rare male, karyotypes, *Drosophila melanogaster*, 577
Mating type, determination factor, *Paramecium tetraurelia*, 367
Metabolism, drug, inbred mouse, 447
Microinjection, *Paramecium tetraurelia*, 367
Mitosis, gene conversion, *Saccharomyces cerevisiae*, 355
Mouse, 79, 463
inbred, 447
Mutagenesis, bacteriophage T4, 505, 525
Mutant
meiotic, *Drosophila melanogaster*, 65
superkiller (*ski*), *Saccharomyces cerevisiae*, 199
Mutation
direct and indirect, *Escherichia coli*, phage T2, 1
dysgenesis-induced, *Drosophila melanogaster*, 49
Glued gene, *Drosophila melanogaster*, 645
insertion, *Saccharomyces cerevisiae*, 179
lethal, sex-specific, maternal effect, *Drosophila melanogaster*, 231
macrofiber formation, *Bacillus subtilis*, 551
P element, revertability, *Drosophila melanogaster*, 279
snf1, suppressors, *Saccharomyces cerevisiae*, 19

Nature, Segregation Distortion, *Drosophila melanogaster*, 375
Nondisjunction, equational mutant, *Drosophila melanogaster*, 65
Nucleotide, synthesis, bacteriophage T4, 343

Oryza sativa L., 141

Pachytene, chromosomes, rice, 141
Paramecium tetraurelia, 367
P element, imprecise excision, *Drosophila melanogaster*, 279
P factor, chromosome rearrangements, *Drosophila melanogaster*, 657
Phosphoglucose isomerase, Clarkia, 131
Plant, isozyme, Clarkia, 131
Polymorphism, protectedness, 166
Population
genetics, theoretical, 679
natural, genetics, *Drosophila melanogaster*, 375

subdivided, Fomica, 307
Porphobilinogen deaminase, mouse, 463

Recombination
deletion, maize, 489
mitotic and meiotic, *Saccharomyces cerevisiae*, 33
Relatedness, Fomica, 307
Repair
error-prone, bacteriophage T4, 505
postreplication, bacteriophage T4, 525
Replication, ribosomal RNA cistrons, *Drosophila melanogaster*, 395
Rescue, thermal, bacteriophage T4, 525
Resistance, phage, experimental evolution, *Escherichia coli*, 1
Rice, 141
RNA
cistrons, *Drosophila melanogaster*, 395, 405
L double-stranded, *Saccharomyces cerevisiae*, 199

Saccharomyces cerevisiae, 19, 33, 179, 199, 219, 355
Segregation Distortion
components, *Drosophila melanogaster*, 423
Drosophila melanogaster, 375
Selection, absolute and relative, *Escherichia coli*, phage T2, 1
Sex, determination, *Drosophila melanogaster*, 231
Sister chromatid, *Drosophila melanogaster*, 65
snf1, mutations, suppressors, *Saccharomyces cerevisiae*, 19
Speciation, transposable elements, *Drosophila melanogaster*, 331
Spermatogenesis, *Drosophila melanogaster*, 611
Sunfish, 435
Suppression, allele-specific, bacteriophage T4, 343
Suppressor
Saccharomyces cerevisiae
omnipotent, 219
snf1 mutations, 19
Ty mutations, 179

Teleost, 435
Translocation, B-A, maize, 117
Transposable element
Drosophila melanogaster, 49
maize, 477, 489
Transposition, Tn*5*, regulation, *Escherichia coli*, 9
Transposon
Drosophila melanogaster, 331
Saccharomyces cerevisiae, 179
Trisomic, morphology and ratios, rice, 141
Ty, element, *Saccharomyces cerevisiae*, 179

Uroporphyrinogen I synthase, mouse, 463

Virus, Drosophila C, *Drosophila melanogaster*, 635

WXY system, thermal rescue, bacteriophage T4, 525
